Clean water in Lake Michigan depends, largely, on us!

Even our landscaping and gardening practices make a difference. Lawn and garden chemicals applied in the Lake Michigan basin can pollute streams, rivers and lakes.

It's easy to adopt landscape and gardening practices that will protect our water.

Come to this workshop to learn how to keep our water clean and healthy!

The keynote speaker will be a native plant and garden expert from the [Cardno JFNew Native Plant Nursery](#), one of the largest native plant nurseries in the Midwest.
